

KA-BAR® | 24

What does it mean to manufacture in America?

At KA-BAR®, it means hard working folks undertaking the steps needed to make a knife each and every day in Olean, NY. Whether it is blanking sheets of steel in Department 1, grinding blades in Department 5, or building folding knives in our State & Union Shop.

When a KA-BAR® is born, it is baptized in sweat and crafted by hardened hands. It comes to you with the fingerprint, DNA, and ghosts of generations of American manufacturing. If you own a KA-BAR® you have a piece of all those who built our knife and have used our products for 125 years.

1258 Short KA-BAR®

When you see the Video Review icon, go to our YouTube or Vimeo channels where you can see product videos along with designer interviews.

1217*

An asterisk next to an item number indicates that the product is also offered in a Clam Pack packaging option for retail display.

All weights and measurements are per product specifications. Due to manufacturing and hand finishing operations, actual product weights and measurements may vary slightly from published product specifications.

Length: 8.5"
Width: 2.63"
Thickness: 0.17"
Steel: 1095 Cro-Van
Grind: Flat
Angle: 20°
HRC: 56-58

Features:

- Knife manufactured in USA with German steel.
- Sheath manufactured in China.

Blade Marks:

Mark Side: KA-BAR
Pile Side: Blank

This heavy-duty chopper gets its shape from its older sibling, the Kukri Machete.

At about 80% the size of the larger version, the Combat Kukri performs just as well at clearing brush and small tree limbs.

Its smaller profile makes it a little easier for toting around - at just shy of a pound.

D2 Extreme Series

Specs listed are for the following products:

1292	1281	1282	1283

From his shop in Hamden, Connecticut, John Ek built custom knives specifically for soldiers, sailors, airmen, and Marines. He even built a knife for the Commander-in-Chief, American President Franklin Roosevelt.

Mr. Ek, who also employed disabled Americans, produced six models of knives beginning in 1941. He referred to these knives as "Ek Commando Knives" as they were purpose built for close quarter use that would become a hallmark of the US Marine Raiders, US Army Rangers, First Special Service Force, and Office of Strategic Services' Operational Groups.

To purchase an Ek Commando Knife one had to send in proof of military service. The knives were numbered and a log was kept to tie the number to the owner.

Americans have carried Ek Commando Knives in World War II, Korea, Vietnam, Afghanistan, Iraq, and countless other locations in between. John Ek's knives live on today through Ek Commando Knives as a testament to his ideas, skills, and unflinching patriotism.

The legendary story of the Eugene Stone Knife lives on with this limited offering by KA-BAR® and Bill Stone. Using his father's original casts to make the famous skull and cobra handle, Bill Stone touched each and every one of these knives, hand finishing them before sending the blades to be blued. The end result is stunning.

The handle is a gorgeous, shiny silver while the blades are a beautiful rich, deep shade of blue. Sold with JRE semi-custom leather sheath and Gerstner golden oak case with nickel corners, hinges and draw latch.

Each knife comes with a certificate of authenticity, a DVD of Bill Stone telling his father's story and how he came to work with KA-BAR® on this limited edition project, and custom-designed packaging.

Size chart is a visual reference and size comparison of all our products in relation to some everyday items.

- The average smartphone measures 6" in height.
- The average 16.9 oz water bottle measures 8" in height.
- The average shoe size of an adult male measures 10.5".
- The average household hammer measures 13".

KA-BAR® Blade Shapes

5Cr15 Stainless Steel

A moderately priced stainless steel that has been used by many knife manufacturers around the world.

1095 Cro-Van Steel

Easy to sharpen carbon steel used in many KA-BAR Knives.

425 High Carbon Stainless Steel

Provides high corrosion resistance, high strength, and ease of sharpening. Corrosion resistance and overall durability make this steel an excellent choice of hard use knives.

440A Stainless Steel

A high-carbon stainless steel used in many American production knives.

Ambidextrous

The ability to carry and use the product, as designed, on your dominant side.

American Hone

Sister company to Union Cutlery Company. Specialized in sharpening products. R. Emerson Brown was president of this company.

Anodized / Anodizing

Anodizing is an electrolytic passivation process used to increase the thickness of the natural oxide layer on the surface of metal parts.

Blister Pack (BP)

A cardboard backed clear-front packaging option that allows products to be hung on peg board for retail sales.

Brown Brothers

The first knife-related company started by Wallace Brown alongside his brother R. Emerson Brown.

Butt Cap

A component at the end of the handle that helps secure the handle.

Clam Pack (CP)

A clear plastic packaging option that allows products to be hung on peg boards for retail sales.

Creamid®

Food and water approved polymer (plastic).

Crossbar Lock

A locking mechanism that extends through both sides of the handle and engages with the blade tang, locking the blade in place. It can be operated left- or right-handed.

Cryogenic Quenching (CR)

The process of freezing blades to improve blade performance.

D2 Steel

A high-carbon, high-chrome tool steel often used for blanking dies. This steel has excellent edge holding ability. Use diamond or ceramic to sharpen.

Danforth Brown

Former President of Union Cutlery and KA-BAR. Son of Wallace Brown. Guided company through the Great Depression and World War II.

Epoxy Powder Coating

A coating process that protects blades from corrosion and also makes them non-reflective.

Flat Grind

The ground surface of the blade is flat from the top of the grind down to the cutting edge. Also known as a "V" grind.

Frame Lock

A locking mechanism cut from the frame of the handle.

Full-Length Tang or Full Tang

Extension of the blade steel that runs completely through the handle to the end of the knife.

Fuller or Blood Groove

A longitudinal groove on the blade of a knife.

G10

An extremely durable material made of woven fiberglass soaked in epoxy resin, then highly compressed and baked.

Glass-Filled Nylon (GFN-PA66)

Material used to make sheaths. Nylon is reinforced with glass particles and other materials to provide strength and durability while still allowing some flexibility.

Guard

Also known as a hilt, is the material that separates the handle and the blade. Serves to keep the hand from slipping on the blade when cutting. Can be single or double.

Hollow Grind

The ground surface of the blade is concave from the top of the grind down to the cutting edge. Used to create a fine cutting edge.

John Brown

One of the founders of what is today KA-BAR Knives. Father of Wallace and R. Emerson Brown. Involved in a number of cutlery businesses including Union Razor, Union Cutlery, John Brown Sons, and American Hone.

Kraton G® Thermoplastic Elastomer

Referred to simply as Kraton® or Kraton G®, is a man-made material resembling rubber that can be molded into knife handles. Provides a non-slip grip. Trademark of Kraton Polymers Group of Companies.

Liner Lock

A locking mechanism that features a tab cut out of the liner which is used as a stop to lock the blade in an open position. To close, the liner tab is pushed back to its original position.

Lockback

A folding knife that has a lock release on the back of the handle.

Manufacturer's Suggested Retail Price (MSRP)

The price at which the manufacturer recommends retailers sell their product. Some sellers may sell above, at, or below this price. This is not determined by the manufacturer.

Micarta®

A man-made material, made by layering resin and cloth. Used to make very fine knife handles. Westinghouse trademark.

MOLLE

An acronym for Modular Lightweight Load-carrying Equipment.

Powdered Metal

A process used to make shaped metal pieces. Fine metal particles are molded under pressure and then fused under high heat. Also known as sintered metal.

PVC

Is used mostly in the construction industry and for signs, healthcare applications, and fiber for clothing - we use it for our waterproof playing cards.

Rockwell Hardness (HRC)

An industry scale used for measuring the hardness of blade steel. The higher the reading, the harder the steel. Written as HRC or RC followed by a range of numbers.

S35VN Steel

A high end stainless steel known for its edge retention and toughness.

SK5 Steel

SK5 is a carbon steel often used in tools. Also known as SK85, this steel has good wear resistance and low maintenance.

Swedge

A faux double edge on the blade of a knife. Excellent for reducing the weight of the blade and balancing.

TPR (Thermoplastic Resin)

Thermoplastic Resin is used for making handles. On KA-BAR products like the Kukri #1249, it has a firm but still "giving" feel.

Tidioute Cutlery Company

A former knife company in Tidioute, PA. May have originated as far back as 1874, though we only have records dating to the late 1890s. Formed the foundation of what is today KA-BAR Knives.

Titanium

A high end metal known for its corrosion resistance, strong, lightweight, non-magnetic properties.

Ultramid®

Trade name for hard plastic-like material used to make handles and other products requiring a more rigid stability.

Union Cutlery

To more accurately reflect their diverse product line the name Union Cutlery Company was adopted. This name replaced Union Razor Company.

Union Razor

The sales company of Wallace Brown in the 1890s. Would later absorb the Tidioute Cutlery Company to manufacture knives in the early 1900s.

Zytel®

A glass-filled nylon material used in making handles for knives. DuPont trademark.

KA-BAR® Knives, Inc. (the "Company") warrants, to the original purchaser of the product only, that this product will be free from defects in material and craftsmanship under normal use and maintenance for the lifetime of the original purchaser. This Limited Warranty does not apply to any failure of, defect in, or damage to the product caused by neglect, normal wear and tear, or by improper use, including throwing the product, batoning with the product, using the blades as a can opener, chisel, pry bar, screwdriver, digging tool, or for any heavy work for which the product was not designed.

If the product fails to satisfy this Limited Warranty, the Company will repair or replace the product or substitute a product of comparable value, at the Company's option, and such repair, replacement or substitution shall constitute the sole remedy for any failure of the product to satisfy this Limited Warranty or any implied warranty (ies) of the Company. In order to have a Limited Warranty claim evaluated by the Company, you must return the product, at your own expense and risk, to KA-BAR® Knives, Inc., at 200 Homer Street, Olean, NY 14760, attention Customer Service Department. Please include with the returned product a brief written description of any claimed defect(s) in or failure(s) of the product. Any returned product determined by the Company to not be eligible for repair, replacement or substitution under the terms of the Limited Warranty will be returned to the Owner.

The Company makes no express warranty or representation whatsoever of or with respect to the product other than the foregoing limited warranty, and all such other express warranties are hereby expressly excluded. Any implied warranties of the Company, including warranties of merchantability and fitness, are limited in duration to the duration of this limited warranty. The Company will not be liable for any special, incidental, or consequential damages, and all such damages are expressly excluded.

Some states do not allow limitations on how long an implied warranty lasts, or exclusion or limitation of incidental or consequential damages, so the above limitations or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary state to state.

Care for Your KA-BAR®

Wipe blades after use with a dry, soft cloth. If knives are exposed to salt water, wash with mild dish detergent, rinse with tap water, then wipe with a dry, soft cloth.

Storing

Treat blade with a light coating of mineral oil before storing in a dry area. Store in cardboard sleeve or plastic sheath that was provided with knife at purchase.

Sharpening

Keep knives sharp by touching up edges as needed. Most KA-BAR® knives can be sharpened using an Arkansas stone or commonly available sharpening system. Most knives can easily be touched up using a coarse or hard stone.

When bringing back a very dull edge, a coarse or hard stone should be used first, followed by a finer, softer stone.

Knives should at no time be sharpened on a belt sander or bench grinder. These machines ruin a factory-sharpened edge.
